ES.next Lab 1

1) Swap the values of x and y using destructuring

2) Using rest parameter and spread operator return min and max value from any array passed to function call and display each of them separately after function call
   note: array length is not fixed

3) Study new array api methods then create the following methods and apply it on this array
   var fruits = ["apple", "strawberry", "banana", "orange", "mango"];
   a. test that every element in the given array is a string
   b. test that some of array elements starts with "a"
   c. generate new array filtered from the given array with only elements that starts with "b" or "s"
   d. generate new array, each element of the new array contains a string declaring that you like the give fruit element
   e. use forEach to display all elements of the new array from previouse point
